

Non-Functional Requirements

NFR-1 Performance

- Share → Second processing shall complete within **3 seconds** under normal network conditions.
- Dashboard shall load within **2 seconds**.
- Search results shall appear within **1 second**.

NFR-2 Availability

The application shall maintain **99.9% uptime** for cloud services.

NFR-3 Reliability

- No user data shall be lost during synchronization.
- Failed processing shall automatically retry.
- Users shall be notified if processing fails.

NFR-4 Security

The system shall:

- Encrypt data in transit (TLS).
- Encrypt data at rest.
- Require authenticated access.
- Prevent unauthorized access.

NFR-5 Privacy

The system shall:

- Never collect information without user initiation.
- Clearly indicate what data is stored.
- Allow permanent deletion of user data.
- Allow users to export their data.

NFR-6 Scalability

The architecture shall support:

- Millions of users.
- Horizontal scaling.
- Independent scaling of processing services.
- Event-driven processing.

NFR-7 Usability

The system shall:

- Require no onboarding to perform the first share.
- Minimize user interactions.

- Complete the Share → Save flow in fewer than three taps after the share sheet.

NFR-8 Accessibility

The application shall support:

- Screen readers
- Dynamic text sizes
- High-contrast mode
- Color accessibility

NFR-9 Compatibility

Support:

- iOS
- Android

Future support:

- macOS
- Windows
- Web

NFR-10 Maintainability

The application shall follow a modular architecture to enable independent development and testing of features such as content capture, reminders, subscriptions, and search.

NFR-11 AI Efficiency

To minimize operational costs:

- AI shall execute only when a user shares content or explicitly requests assistance.
- Structured data shall be reused instead of repeatedly invoking AI.
- Previously processed content shall not be reprocessed unless modified.

NFR-12 Data Integrity

The system shall maintain consistency between:

- Memory Vault
- Calendar
- Reminders
- Subscription Manager

Any edits to an item shall be reflected across all relevant views.
