

Phase 4 — UX Design

Instead of opening Figma immediately, we'll follow the same process product companies use.

Step 1 — Design Principles ★★★★★

Everything should follow these principles.

1. Zero Friction

Capturing something should take **less than 3 seconds**.

2. Never Interrupt

Second shouldn't constantly ask questions. Only interrupt when absolutely necessary.

3. One Decision at a Time

Never show: 10 buttons

Show: Meeting detected → Create Calendar Event? [Yes] [Choose another]

4. Progressive Disclosure

Don't overwhelm users.

Example: Meeting ▼ Details

Only expand if needed.

5. Everything is Editable

AI is never "right." The user is.

6. Privacy is Visible

Every screen should reinforce

"You chose to share this."

Never feel invasive.

Step 2 — Information Architecture

Before drawing anything.

Second

- Home
- Inbox
- Calendar
- Memories
- Subscriptions
- Search
- Settings

Notice

No Tasks.

No Projects.

No Productivity.

Step 3 — Navigation

I wouldn't use tabs.

I'd use

Bottom Navigation

-  Home
-  Inbox
-  Search
-  Profile

Everything else lives inside Home.

Home

Today's Brief

Upcoming

Subscriptions

Recent Memories

Inbox

The most important screen.

Everything comes here first.

Meeting

From WhatsApp

Review

Netflix

Subscription

Review

Screenshot

Review

Review Screen

Instead of

“What is this?”

Second says

I found:

Meeting

Friday

6 PM

Sarah

Looks good?

[Save]

[Edit]
Simple.

Memory Vault

Pinterest meets Apple Photos.
Cards.
Concert Ticket

Screenshot

Trip
PDF

Passport
Image

Subscription Manager

Netflix
₹649
15 Aug

Spotify
₹119
21 Aug

Beautiful. Minimal.

Calendar

Apple Calendar.

Not Google Calendar.

Simple.

Monthly.

Agenda.

Dashboard

The homepage.

Good Morning
Today

Coffee
6 PM

Netflix
Tomorrow

Dad
Birthday

No charts.

No analytics.

Search

This should feel like Spotlight.

Search...
Results
Sarah

Meeting

WhatsApp

Netflix
Subscription

Passport

Step 4 — User Flows

Now draw every journey.

Example

```
WhatsApp  
↓  
Share  
↓  
Second  
↓  
Inbox  
↓  
Review  
↓  
Calendar  
↓  
Dashboard
```

Another

```
Email  
↓  
Share  
↓  
Quick Save  
↓  
Subscription  
↓  
Reminder
```

One thing I would completely redesign

I don't think **Dashboard** should be the first screen.

I think this should.

```
Good Morning  
_____  
Today  
Coffee with Sarah  
6 PM
```

Netflix
Tomorrow

Inbox
3 things waiting

Search

Almost like your COO handing you a briefing for the day.

I think the entire app should revolve around one concept

Not “tasks.”

Not “events.”

Not “subscriptions.”

Everything is an **Item**.

Every item follows the same lifecycle:

Capture
↓
Inbox
↓
Review
↓
Structured
↓
Surface
↓
Archive

Whether it's:

- A WhatsApp message
- A screenshot
- A birthday
- A bill
- A PDF
- A flight ticket
- A subscription

It is always an **Item**.

That single mental model will make the app much easier to learn, extend, and maintain than designing separate experiences for every content type.

I recommend one more step before Figma

Before drawing even a single wireframe, let's define **every screen** in the app.

Not the UI—the complete screen inventory.

For example:

1. Splash
2. Onboarding
3. Login
4. Home
5. Inbox
6. Review Item
7. Calendar
8. Event Details
9. Memory Vault
10. Subscription Manager
11. Search
12. Item Details
13. Notifications
14. Profile
15. Settings
16. Privacy
17. Capture Preferences

Once we have that inventory, designing the UI becomes much more systematic, and we can ensure every screen supports the same simple, low-friction experience. I think that's the right next step.
